Wireless Arming Station
Operating Instructions

Up to four wireless arming stations can operate on a wireless alarm system.
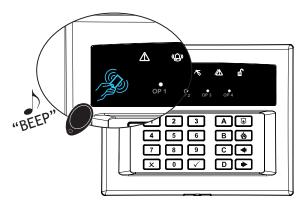

Setting and Unsetting
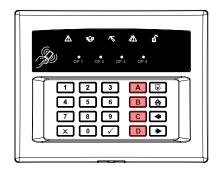

If you are using a proximity tag to set or unset the wireless alarm system, press any key first (except D), to 'wake' the wireless arming system before presenting a tag.

Alternatively, if a user code is being used, then enter the code. The wireless arming station will automatically 'wake' once the first button is pressed.

After a tag or code has been entered, select the area to set by pressing A , B , C or D . The key will illuminate indicating that area has been chosen to be set. Once confirmed, press the ✓ key.

To unset, enter the user code, or press any key then present the proximity tag.

Activating the Outputs

Press the D key and enter the Master Manager code or a user code.

The keys 1 2 3 and 4 will illuminate.

The OP1–4 LEDs will illuminate once the 1-4 numeric keys have been pressed. Once illuminated, it signifies that the output has triggered. Press the key again to deactivate the output.
